Attachments: OU1 50% RD Comments.pdf

Hello Frank,

I am fine.

Ex. 6 Personal Privacy (PP)

Ex. 6 Personal Privacy (PP)

Comments on the 50% RD were provided to Honeywell. Most of the comments were about the long term monitoring plan as you will see in the attachment provided.

The Environmental Covenant restricting the use of OU3 is with GAEPD. Hopefully that will be finalized soon.

I hope to get time to look into the ATSDR numbers soon. Reconciliation of the data used by different groups is difficult.

Take Care.

Pam

Hi Pam. I hope you are doing OK.

Speaking with Rachael the other day, ICs at LCP came up. How's the process going? GEC is interested in staying on top of it, getting plugged in, and keeping the community informed. Has it progressed enough to get them involved yet?

Also, just wondering if yall were able to find out anything more on those historical samples with relatively high contamination levels that ATSDRD noted in those few parcels – locations, depths, contaminant concentrations, whether or not they were in areas that were later excavated?

Anything you could provide on that will be appreciated.

Stay safe –

There will be a monitoring plan for OU1 to ensure the remedy is functioning. For OU3, no action was taken, but ICs are being implemented so the use of the property will be checked. For OU2, groundwater will be monitored until it is restored to beneficial use after whatever remedial action needed is taken; O&M will be conducted as needed. There will not be sampling of upland soil unless something occurs to make that necessary. The five-year reviews that I have participated in are very thorough.

Thanks. So it seems that the status of the entire site – all OUs – will be evaluated every 5 years.

But because you said: “evaluate all Ous *where actions have been taken and waste is left in place*”, I am not sure. Since No Action is to be taken for OU3, does that mean no soil, sediment, or GW sampling would be performed in a 5 year review to see if Upland Soil conditions might have changed (for example, what if you discover an oily seep at the surface somewhere in an Upland Soil area during a site-walk – would that be sampled and its significance be evaluated?).

Hi Frank,
Five-Year Reviews will be triggered by the start of the remedial action for OU1. The land use check will be part of that review. One the FYR clock is triggered, it will repeated every five years are evaluate all Ous where actions have been taken and waste is left in place.
I hope that makes sense.
Pam

Hi Pam, hope things are going well with you.

Rachael asked me if EPA will be doing 5 year reviews following the OU 3 Upland Soil ROD. I see in the ROD that 5 year reviews *of land use* will be done. But I told her I didn't think any soil or ground water or even sediment sampling would be done – there's no remedial system to check for performance, and I didn't think ground water would be monitored because GW is a separate OU.

I know it's premature to say what the remedy will be for GW and Cell Bldgs, but I suspect residual contamination will be left on-site so I'd expect there will be 5 yr reviews with GW monitoring following whatever is done with OU2.

Please let me know if I'm mistaken about OU3.

Thanks.

Frank,
The OU1 Pilot study report was just posted on the website. Also, the ROD for OU3 will be posted soon if it is not already on the website. Angela and I plan to reach out to everyone in the community soon. For me it will be after the end of the fiscal year September 30th. I hope you are doing well and staying safe!

V/r,
Pam

Hi Pam and Angela, hope things are good with you both.

I didn't hear anything from yall on possible developments/status for OU 1 and OU3. Got anything to share?

Thanks.

Hi Frank,
For OU2, EPA has approved the final version of the Site Characterization Summary Report, the PRPs have completed another round of groundwater sampling, and EPA has directed the PRPs to prepare and submit a schedule for the RI/FS. See our attached letter.

I've copied Pam and Angela to give you an update on OUs 1 and 3.

Hello Rob. I hope things are going well for you.

Have there been any reports to EPA lately, or any recent developments worth mentioning to GEC ? I would include anything like that in a quarterly status-update on the Brunswick sites that I will prepare for GEC by the end of September.

Thanks.
